Summary

Frontend developer with experience in HTML, CSS and JavaScript, specialised in React JS and currently learning Redux. I am aware that continuous learning is essential. So I use personal qualities of: self motivation, observation and curiosity to continue learning. Teamwork is essential, which is why, during my working life, I have learned to be a support to my colleagues, with the aim of maintaining a positive opinion of the company from our clients.

TECHNICAL PROJECTS

Waves audio player - Github | Demo
It is an audio player with a song library included, in addition to the basic controls.
Skills - [Reactjs, SCSS, Firebase]
- The library is in a data.js file in the form of a function that returns an array of objects, which stores all the properties of each song including an id that is randomly generated with the npm uuidv4 library.
- In the application I operate with hooks, so the state change is carried out with useState from the App.js component, which is the top component, and goes down to the necessary components through props.
- I make use of async / await functions to load the songs, skip forward them, or skip back. Simply put: "when you have the necessary information available, only in that case, update it."

Capture website - Github | Demo
Website for a multimedia company.
Skills - [Reactjs, Styled-components, Framer motion, Firebase]
- I have used React Router to connect the different pages. I created a component called ScrollTop that, through the useEffect and useHistory hooks, detects when the url changes and ensures that we see the page from the beginning.
- I created a reusable Toggle.js component to be able to show and hide the answers. If I had used useState and an onClick event for that functionality in each answer, clicking on any question would trigger all the answers.
- I keep my animations organised with "variants". They are Framer Motion variables that store objects with two properties: hidden and show. Both save another object with the properties that define how the animations begin and end. This way they can be used where you need them.

Disney+ clone - Github | Demo
Project based on the original Disney website.
Skills - [Reactjs, Redux, Styled-components, Firebase]
- I have assembled the image gallery with react-slick, which is a React module to create image galleries in a fast and organised way.
- In this project the information of each movie is in a database in Firebase. Which I access from the Home.js component. Using the useEffect hook, the information will be loaded every time the user refreshes the page.
- In this project I used Redux to carry out the change of states. This being the first project I worked on with Redux.

SKILLS

- Fluent English & native Spanish speaker.
- Good oral and written communication.
- Attention to detail.
- Adaptability to change and willingness to embrace new ideas and processes.
- Positive and approachable manner.
- Team management skills and team player qualities.
- Enthusiastic about developing my skills.
- Impeccable customer service skills and social perceptiveness.
- Strong time management and organisation skills.
